MODEL 911 PRODUCT LENGTH CUTTER

CUTS CLEAN WHILE PROVIDING HIGHEST YIELD

CONSTRUCTION

Sturdy, stainless steel throughout insures long life. Easy access to blades for cleaning and service.

SANITATION

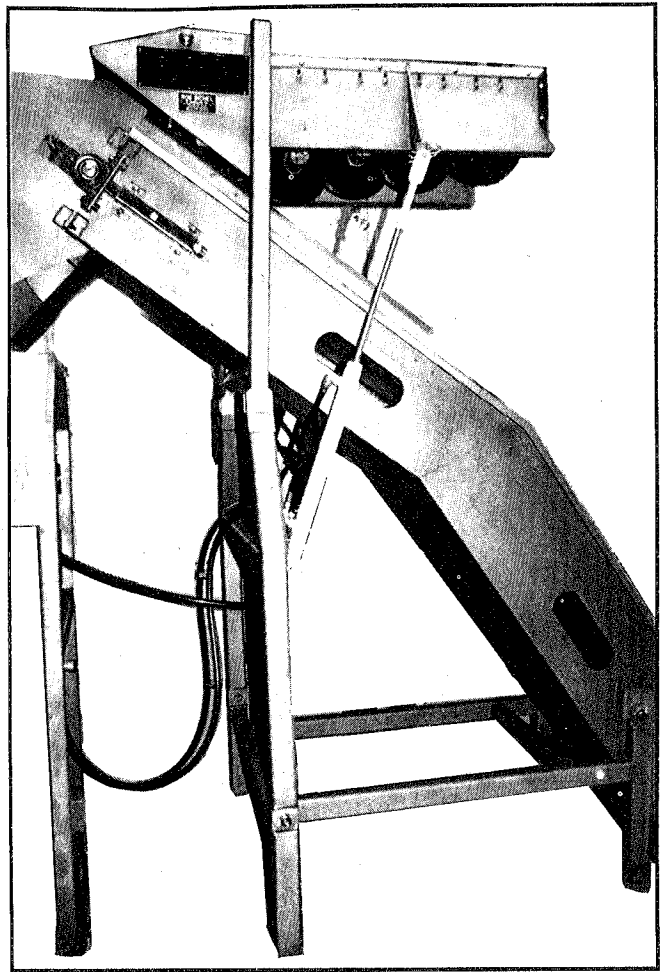

Design provides clean cuts without "sawdust" waste. Continuous welds eliminate cracks and crevices for easy cleaning.

POWER

The power is supplied by electric or hydraulic motor. Hydraulic or air cylinders lift the cutting head for cleaning and maintenance.

THE BLADES

The blades are circular, free wheeling - NOT powered. They are set in staggered positions, so the product encounters only one blade at a time, which eliminates wedging and allows for the use of smooth cutting edges. Cuts are clean and square with NO "Saw Dust" waste.

PRODUCT

The product is cut into predetermined adjustable lengths - typically 2 inch and 4 inch cuts. Carrot crowns, or celery roots are cut off first and discharged out the side, so it is separated from the good product immediately.

SPECIFICATIONS

Inlet Height. 39"
Overall Length . . 126"
Discharge Height. 70"
Overall Width. . . 50"
Motor 2 HP, 230/460 V.m 3
Phase, 60Hz.
