**Key Features -** Quick Change Brushes  
Cartridge Bearings  
CIP Spraybar  
Adjustable Pitch  
Electric Drive  
Heavy Stainless Steel Frame  
Available in 3 Sizes  
to Fit Your Needs

## • **IMPROVES YIELDS**

Substantial yield improvements can be achieved in your process. Soft brushes are utilized which gently remove the peel from the product instead of "grinding" it off as in the case of a conventional scrubber. *This means less product is lost in the scrubbing process and higher yields to you.* You automatically increase your production volume without purchasing additional product.

## • **ELIMINATES WATER**

No water is used in the peeling process with the RC "WATERLESS" PEELER/SCRUBBER. Regardless of where you are located your water acquisition and treatment costs are a financial consideration. *Expensive waste water treatment equipment is not required.*

## • **REDUCED MAINTENANCE TIME**

The RC "WATERLESS" PEELER/SCRUBBER is designed with easy maintenance in mind. Quick change brushes and bearings, automatic lubricating system, CIP spraybar and the overall design of the unit contribute to significantly easier maintenance. *Easy maintenance means less maintenance.*
